

Kubota®

# MOLD A TRACK LOADER

**TIP:** You can use markers to color white Model Magic!

**1** Divide one pack of Model Magic® into the following track loader parts:

**2** Make the “cab” by creating a white cube, add details in black (Tip: you can use a black marker or thin strips of Model Magic.)

**3** Create the wheels by shaping the two medium balls into triangles—use a household object (scissors, ruler, etc) to create the “treads”! Attach wheels to each side of cab.

**4** Divide the orange in four pieces. Use two of the orange pieces for the body. Flatten them into rectangles. Put one on the front and one on the back of the cab.

Kubota®

# MOLD A TRACK LOADER

**5** To create the arms, roll the last two orange pieces into snakes. Then flatten slightly & bend down.

**6** Make the bucket by flattening the rectangle just in the center. Use the remaining black Model Magic to create 4 small "teeth" then attach to loader arms.

**7** Attach the bucket to the arms. Attach the arms above the wheels. Now you're on the right **TRACK** to **LOAD** some dirt!
